

ONYX PRO

ONYX GEMSTONE

The aptly named Onyx Pro, much like it's namesake, the onyx gemstone, is nothing less than a jewel!

Born from the perfect combination of reliable, high performance Crem machines and our continuous pursuit of innovative solutions to push coffee technology further, the Onyx Pro is the professional grade premium espresso machine that merges creative design with endless customization possibilities.

Our goal from the very beginning of this journey has been to create an espresso machine that can work hard all day long while still looking its very best, perfectly balancing exceptional beauty with practical utility for demanding baristas.

Multi Boiler technology integrated with PID control and clear digital touch screen with temperature display creates the perfect environment to get the best out of any coffee. Barista lights, shot timers, steam levers taps, illuminated glass side and back panels and fold away cup trays are just some of the features packed into the Onyx Pro. Personalise this machine by including your logo, image or colour onto the illuminated glass panels and make it come alive and stand out.

Why not let your next machine create a jewel of an espresso by making it with the Onyx.
