PART I

1 General Safety Instructions

1.1 Basic Operation

- Read the operation and safety manual prior to using the strapping machine.
- The operation and safety manual should remain attached to the machine at all times.
- The machine may only be operated in accordance with its designated use.
- The strapping machine was built in accordance with state-of-the-art standards and recognized safety rules. Nevertheless, improper use can still result in injury to personnel or damage to the machine and other material property.
- Machine shall only be operated by trained personnel.
- Perform inspections and maintenance at regular intervals. Refer to the Maintenance section of the manual.
- The machine may not be put in operation before checking the respective devices.
- Safety devices must never be bridged or eliminated by any means.
- To transport the equipment only use lifting apparatus and loading devices with sufficient capacity.
- Always disconnect from external power supply when changing the location of the machine, even if the location should only be slightly changed. Connect power supply properly before returning to service.
- Do not alter or bypass protective interlocks.
- Do not alter circuits and machine unless authorized to do so by the manufacturer.

1.2 Basic Safety Precautions

- In addition to the instructions for operation, the user is to be instructed in all generally applicable legal or mandatory regulations relevant to safety or the environment.
- Long hair, loose-fitting garments, or jewelry can be a safety hazard. These items must be secured prior to equipment operation.
- Use protective equipment whenever appropriate or when required by law.
- Carefully observe all safety instructions and warnings attached to the machine. Keep safety labels clean and legible.
- People that are being trained to operate or service the equipment must be supervised by experienced personnel.
- Any electrical work performed on the equipment must be conducted by a skilled electrician or under the supervision of a skilled electrician. All work must be observed good electrical engineering practice and follow safety rules and local wiring standards.

1.3 Safety Instructions Governing Specific Operational Phases

- Avoid unsafe operation of the equipment.
- The machine is only to be operated when it is in good running order. Only operate the equipment in a safe manner; all protective and safety devices must be in place and fully functional. This includes removable safety devices, emergency shut-off equipment, noise-protection devices and exhaust fans.
- The machine is to be checked for damage and defects at least once each work shift. Any changes, including the working behavior of the machine, are to be reported immediately. If necessary, the machine is to be stopped and locked-out immediately.
- In case of a malfunction, the strapping machine is to be immediately stopped and locked-out until the fault has been eliminated.
- Before starting the strapping machine, make sure that the area is clear and safe.
- Do not place any tools or parts onto the machine.
- Operating personnel needs to be well trained before executing special operations and maintenance work; this work needs to be done with the proper supervision.
- Always check and tighten connections after maintenance or repair.
- After completing maintenance or repair, all safety devices must be replaced and checked for functionality before operating the equipment.
- To minimize the environmental impact, all consumables and replaced parts must be disposed of safely.
- Before starting the machine, check that the accessories have been stowed away safely.
- Avoid operating the machine in a fashion that could upset its stability.

1.4 Warning of Electrical Dangers

- Immediately remove power to the machine in case of trouble in the electrical system. Replace a fuse with one with the same style and ratings; pay particular attention to matching the specified current.
- Any electrical work performed on the equipment must be conducted by a skilled electrician or under the supervision of a skilled electrician. All work must be observed good electrical engineering practice and follow safety rules and local wiring standards.
- Inspect the electrical equipment of the machine at regular intervals. Tighten any loose connections. Check wiring for scorch marks; replace scorched wiring and determine and correct the reason for the overheating.
- When working on live equipment, ensure that a second person is available to cut power in case of an emergency. When appropriate, secure the working area with safety tape and a warning sign. Use insulated tools for electrical work.
- Before working on high-voltage assemblies, turn off the power supply. Carefully
 discharge the supply cable and short-circuit any energy-storage components such as
 capacitors.
- If the equipment was moved, carefully refit and refasten all parts removed for transport before reapplying power.
- Before moving the machine, remember to disconnect the power cable.

1.5 Grounding Instructions Shall Include the Following

- This product must be grounded. In the event of an electrical short circuit, grounding reduces the risk of electric shock. This product is equipped with a cord that has a grounding wire and an appropriate grounding plug. The plug must be plugged into an outlet that is properly installed and grounded in accordance with all local codes and ordinances.
- If repair or replacement of the cord or plug is necessary, connect the ground wire to the ground terminal of the plug. The wire with green insulation (with or without yellow stripes) is the grounding wire.
- Check with a qualified electrician or service person if the grounding instructions are not clear or if in doubt about the proper grounding of the machine. Do not modify the plug provided; if it will not fit the power outlet, have the proper outlet installed by a qualified electrician.

DANGER!

Improper installation of the grounding can result in electrocution.

1.6 Before Operating

- Read the instruction manual before operating the machine for your safety.
- Wear eye protection and safety gloves before operating this machine.

Eye protection must be worn

Safety gloves must be worn

- Verify that the power line voltage is correct.
- The machine must be properly grounded to avoid a shock hazard. All wiring must be in accordance with local wiring standards.
- The strapping machine can only be operated with polypropylene (PP) strapping; do not use polyester (PET) strapping or polyethylene (PE) cord strap.

1.7 During Operation

- The weight of the package cannot exceed 70kg. For package weight over 25kg, it may be necessary to use lifting aids for handling; while package weight over 40kg, it's necessary to handle it with conveyor system.
- The size of the package should not be less than 70 mm \times 20 mm (2.75 inches \times 0.75 inches).
- While running, check the unit for any unusual sounds or smoke emissions.
- Keep away from the inside of the arch while the machine is operating; do not put your hands or body into the arch when the machine is running.

NOTE: It is normal for the heater tongue to smoke during the sealing operation.

1.8 After Operating

- Remove dust and dirt from the unit; pay particular attention to the interior of the arch.
- Turn off the power when the machine is not in use.

1.9 Signs and Symbols

Symbol	Meaning
	Warning for dangerous voltage! Contact with live electrical parts will result in severe injury or death.
SSSS	Warning for hot surface! Welding area is approximately 270°C(520°F) Allow sufficient time for the heater to cool down before any work in welding area.
	Warning for danger! Do not put your hands or body into arch working area when machine is operating.

2 Machine Information

2.1 Areas of Application

The strapping machine is to be used for strapping packages, cartons, paper boxes, newspapers, magazines and those materials using a polypropylene (PP) strapping for stabilizing purposes when in transportation. Be careful for rigidity of working materials, and don't try to pack agri-foodstuffs or other such material.

This machine was designed for certain applications only. We strongly recommend that this machine **NOT** be modified and/or used for any application other than for which it was designed. If you have any questions relative to its application **DO NOT** use the machine until you have had detail instruction from your dealer.

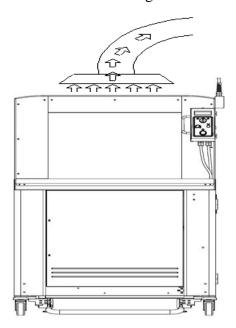

2.2 Environment Information

The strapping machine shall be installed in the following conditions:

- Supply voltage: 0.9 1.1 nominal supply voltage
- Source frequency: 0.99 1.01 nominal frequency
- Ambient temperature: 5°C 40°C (41°F-104°F).
- Altitude: shall be at altitudes up to 1000m above mean sea level.
- Relative humidity: not exceed 50% at 40°C.
- Atmosphere: Free from excessive dust, acid fume, corrosive gases and salt.
- Avoid exposing to abnormal vibration.
- Don't use machine in dangerous environment.
- Don't use machines in damp or wet locations, or expose them to rain.
- Please provide a suitable illumination around the machine for safety operation.
- Work place of user should have a fire extinguisher or other devices that meet their local safety regulations, and always be careful.
- Internal parts requiring frequent inspection and adjustment, and maintenance areas must be provided with a suitable illumination around the machine.

If there may be harmful gases, fumes or dust generated during heating, user or system integrator must install exhaust system for the extraction of harmful substances. The exhaust system shall be positioned according to the vent location. Please refer to the figure.

The user should refer to a professional expert or relevant authority to prevent the dangerous substance/ gas emitted by suitable means according to local /national environmental/health codes/regulations.

2.3 Storage

- The store room must be dry.
- Do not expose the machine to extreme cold or heat environment.
- Place the machine on an even floor in order to avoid any distortion.

2.4 Machine Description

- Automatic strapping machine for polypropylene (PP) strapping material.
- Strap width from 5mm to 9mm.
- Electronic heater temperature control.
- Hinged front table.
- Automatic strap loop ejection in case of strapping cycle without package.
- Extra tough construction.
- Simple, safe and user-friendly operation.
- Automatic strap feeding system.
- Automatic strap end detection.
- Mobile, with large table area and high capacity strap reel
- Table surface made of stainless steel.
- Strap tension adjustable from soft to very high.

2.5 Safety Devices

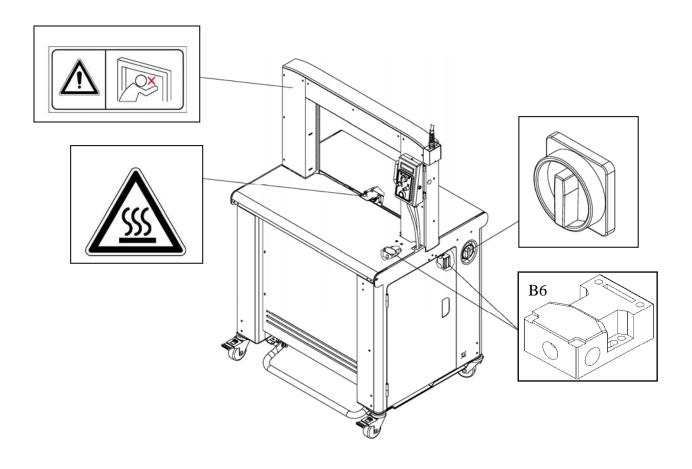

Danger!

Operate the machine only when all safety devices are at their place and are functioning correctly.

The machine has been constructed in accordance with the applicable legal regulations. The machine is reliable in operation. Nevertheless the machine may constitute a danger if it is operated in improper or undue condition.

Danger points that cannot be avoided due to equipment design are equipped with safety devices. If necessary, these points are marked on the machine with warning signs, and in the manual under working safety instructions.

The machine is equipped with the following safety devices:		
1.	Warning signs at the danger points of the machine	
2.	Automatic shunt down of machine when front table opened	
3.	Live parts are secured by cover	

If it is necessary to make adjustments inside the machine during operation, after a strap jam for example, the rear table top can be unscrewed. Observe caution as the machine is still fully functional with the covers removed. When the front table top is opened, safety switch B6 is activated. This will remove power but the heating element will keeping heating.

CAUTION!

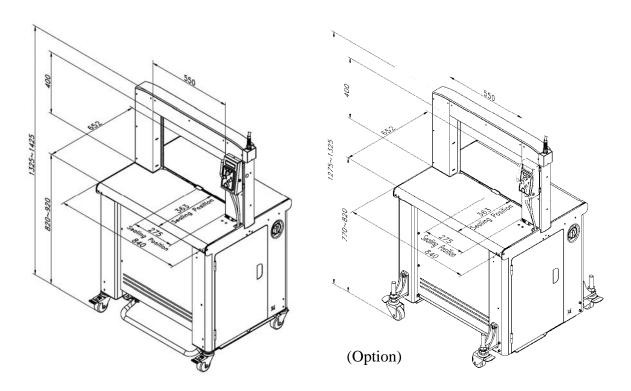

The heating unit operates at a very high temperature in order to melt the PP strapping. To prevent burns, avoid contact with this area.

2.6 Technical Specification

2.6.1 Electrical Specification

System configuration:	1L+N+PE (Ground)	1L+N+PE (Ground)
Nominal power:	0.5kW	0.5kW
Rated current:	3A	5A
Rated voltage:	220V/230V/240V	110V
Rated frequency:	50Hz	60Hz
Type of current	AC - single phase	AC - single phase

2.6.2 Technical Data

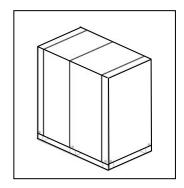

Strap width	5mm, 6mm, 9mm
Strap thickness	0.35mm up to 0.65mm (0.014" – 0.026")
	Coil diameter 200mm (8" nominal)
Strap coil diameter	Outside diameter 420mm (16.5")
	Width(Face) 190mm (7.5")
Table balak	Minimum – 820mm (32.3")
Table height	Maximum – 920mm (36.2")
T.11.1.1.1.(O.1)	Minimum – 770mm (30.3")
Table height (Option)	Maximum – 820mm (32.3")
Weight	158kg (348 lbs.)
Noise emission	78 dBA
Ambient temp	5°C ~ 40°C (41°F ~104°F)
Minimum package size:	70mm W × 20mm H (2.75" W × 0.75" H)
	arch size minus 50mm (1.97")
Maximum paakaga siza:	EX: arch size: 550W×400H
Maximum package size:	Max. package size: 500mm W×350mm H
	(19.7" W × 13.8" H)

3 Preparation Before Operating the Machine

3.1 Shipping

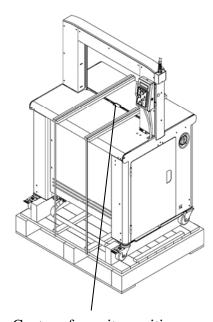

The equipment is delivered in transport units. Each transport unit is loaded onto a wooden pallet, secured by polyester strapping.

3.2 Transportation & Centre of Gravity

The machine must be secured on a pallet for transportation. A forklift (or other lifting device) is necessary for lifting the machine to the pallet. The casters must be fit nicely in the recess on the pallet for proper packaging. Secure the machine to the pallet with plastic strapping across the top plates with a layer of cardboard on it to avoid damage. Cover the machine with sturdy box for protection and hold the whole box to the pallet with plastic strapping.

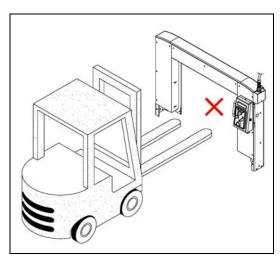

The machine can be removed from the pallet using forklift truck or other lifting device.

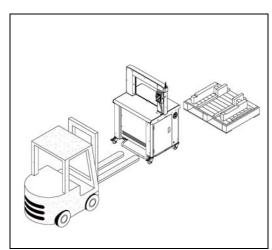

Center-of-gravity position

CAUTION!

Do not carry machine by having the forklift's fork under the arch, but only under the machine frame.

Danger to Lift!

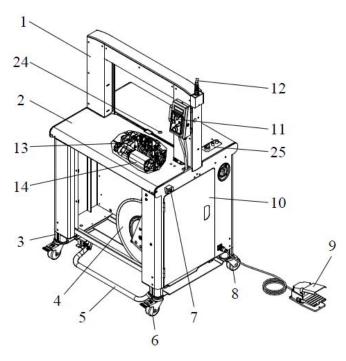

Suspend loads can fall down.

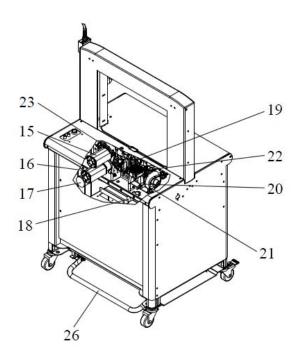

By inappropriate mounting or fracture of hoisting device the load can fall down and cause serious injuries or death.

Do not step under suspended loads!

Use appropriate hoisting devices and fasteners.

3.3 Construction Layout

- 1. Arch
- 2. Upper Table Front
- 3. Adjustment Leg
- 4. Reel
- 5. Foot Bar (Front)
- 6. Caster (Brake)
- 7. Reel Brake Release
- 8. Caster (Free)
- 9. Foot Pedal (Option)
- 10. Side Door
- 11. Control Panel
- 12. Power Cord
- 13. Strapping Head Unit
- 14. Main Motor M1

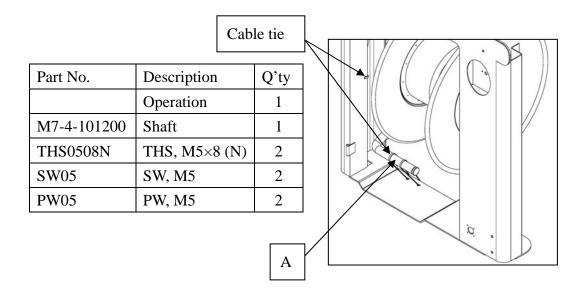

- 15. Feed Motor M2
- 16. Tension Motor M3
- 17. Strap Accumulator Motor M4
- 18. Automatic Feed Motor M5
- 19. Proximity Sensor SQ1
- 20. Proximity Sensor SQ2
- 21. Proximity Sensor SQ3
- 22. Fan (M11)
- 23. Heater
- 24. Photo Eye (Option)
- 25. Timer Box (Option)
- 26. Foot Bar (Rear)(Option)

3.4 Installation

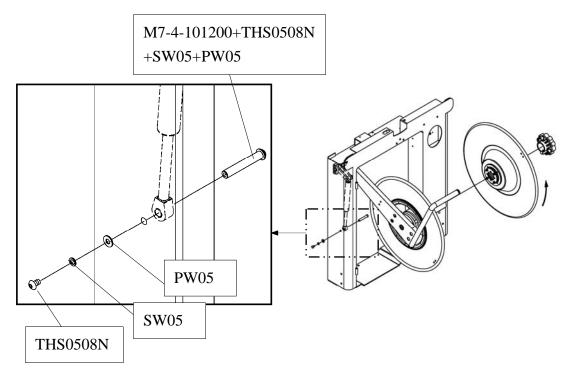

- 1. Remove the packing material and check that the machine is complete and without any shipping damage.
- 2. Installation for Gas Spring

To protect the Gas Spring, the PIN on one side of the Gas Spring would be detached before shipment and the Reel Group would be also fixed by Cable tie (shown as following drawing). Before operating the machine, the Gas Spring must be installed well.

- a. Open the Right door of the machine and take out the plastic bag A. Inside this bag, there are an operation manual and parts as listed in following chart.
- b. Cut the Cable tie which is fixing the Reel Group.

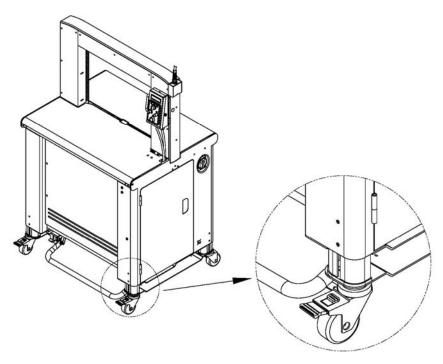

c. Have M7-4-101200 Shaft threading from inside of the machine and then lift the Reel Group and move the Gas Spring to make the PIN also goes through the hole and use 2 Allan Key with 3mm to fix THS0508N+PW05+SW05 all together.

3. Adjust the table height by repositioning the screws underneath the machine frame (refer to below drawing). After adjustments, be sure to tighten all the fixing screws.

Caution!

Be sure to take out the wire for the proximity switch underneath the left side of machine to avoid any damage before adjusting the table height.

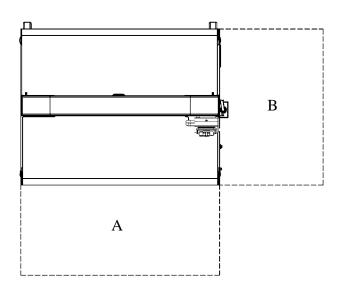

- 4. After positioning the machine ready for working, be sure to lock two front casters (with brake) to avoid machine's movements.
- 5. When moving the machine, be sure to un-lock the two lockable casters. Re-lock the two casters after re-positioning the machine.
- 6. Do not move the machine unless it's necessary. Before movement, be sure to turn off the power, unplug it, put the power cord on the machine and un-lock the front two lockable casters.
- 7. Minimum Requirements to the Electrical Supply
 - The electrical supply cord for the machine must have a minimum cross-section of at least 1.0 mm² (16 AWG).
 - The maximum power line fuse must not exceed 16 Amp.

3.5 Operation Space

Keep the area (A) and (B) free for the operator.

The area (A) is necessary for operating strapping machine.

The area (B) is necessary for changing the strap or adjusting strap amount in the accumulator.

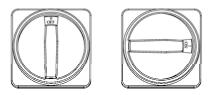

3.6 Operating Elements

1. Main Power Switch:

Provides the machine with power.

Switch to "1" position for turning the main power on.

After strapping, switch it to "0" to turn off the machine.

2. LCD Display:

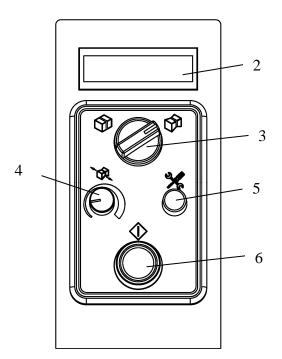

Indicates strapping condition of machine and error massages.

3. Soft - High Tension Switch:

Switch to right for High strapping tension. Switch to left for soft strapping tension.

4. Strap Tension Potentiometer:

Turn clockwise to increase strapping tension; turn counter-clockwise to reduce strapping tension. This potentiometer is only functional under High tension mode.

5. Function Encoder:

Turn clockwise or counterclockwise to change strapping settings.

Also, it offers settings for weld cooling time and photo eye timers (photo eye timer is available only if the machine comes with photo eye switch option) (expressed in page A23). Other settings can only be changed by technicians with password.

6. Start Switch:

- After turning on **Main Power Switch**, you must press the start switch for machine to get ready for working.
- To initiate a strapping cycle.
- To clear up machine fault.(reset)

7. Reel Release Switch:

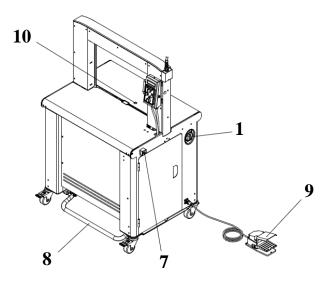

To release the dispenser for easily taking out strapping from it.

8. Foot Bar (Front):

To initiate a strapping cycle. To clear up machine fault. (reset)

9. Foot Pedal Switch (Option):

To initiate a strapping cycle. To clear up machine fault. (reset)

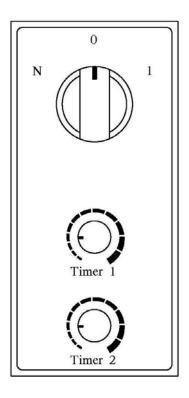

10. Photo Eye Switch (Option)

The purpose of the photo-eye switch is to automatically initiate strapping cycles when a package is detected.

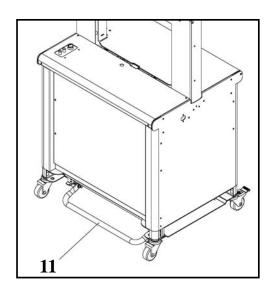

The controls for the photo-eye are shown in the figure below.

Function	Function
0	The photo-eye is disabled. The strapping cycle must be initiated with Start switch on the control panel, Foot bar switch or optional foot pedal.
1	A single strapping cycle: initiates a cycle when a package is detected by the photo-eye. Delay time for initiating the cycle is controlled by TIMER 1.
N	Multiple strapping cycles: initiates a cycle when a package is detected by the photo-eye. Cycling continuously until the photo-eye is no longer "detects" a package. The cycle timing is determined by TIMER 1 and TIMER 2.
Timer 1	Sets the delay time from the moment that a package is detected until the 1 st strapping cycle initiates. This allows an operator to properly position a package for the first strap. It is adjustable from zero to five seconds.
Timer 2	It's the delay time (interval) between strap cycles. When multiple strapping cycles are needed, this timer is for an operator to determine the interval between each straps. It is adjustable from zero to five seconds.

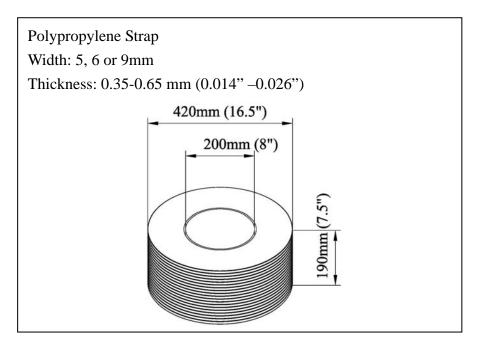

11. Foot Bar (Rear)(Option):

To initiate a strapping cycle. To clear up machine fault. (reset)

3.7 Instructions for Loading PP Strap

3.7.1 Specifications

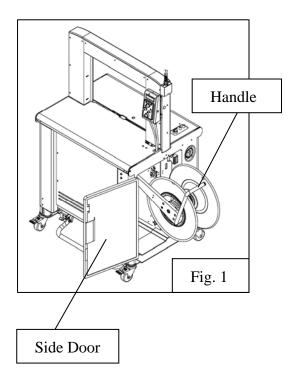

Note:

Strap coil should not be heavier than 12kg (27 lbs). Too heavy strap would damage the Reel support system.

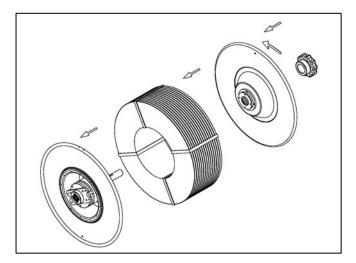

3.7.2 Strap Reel Installation

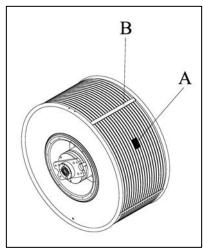

- 1. Open the side door on the right of the machine (fig. 1).
- 2. Lift the reel handle up all the way to the end (fig. 1).
- Release the Reel Nut Handle by pressing and turning it to the left.
- 4. Take out the Outer Flange.
- 5. Install a new strap coil onto the drum according to the instructions on the reel.
- Put Outer Flange back and the Reel Nut Handle. Turning the Reel Nut Handle to the right to lock it.
- 7. Remove the protective straps (B) and the stickers (A)
- 8. Press down the reel handle to put the reel back into the machine.

Note:

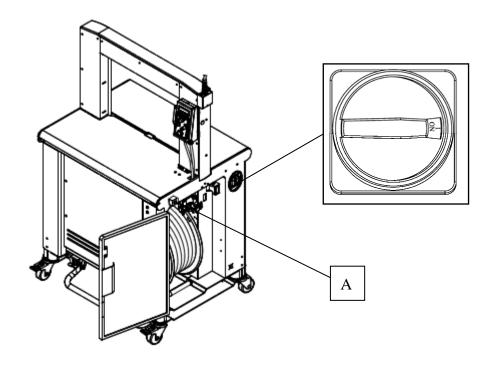

The Reel Nut Handle is released by turning to the left. Tighten it by pressing and turning it to the right.

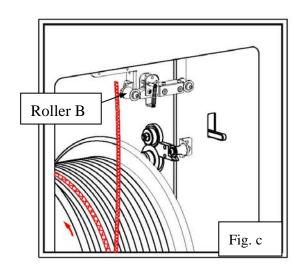

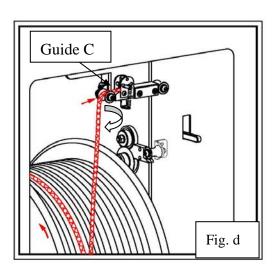

3.8 Auto Strap Feeding Process

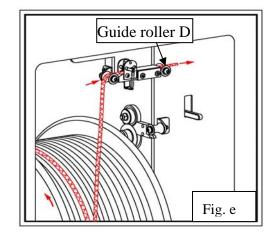

- 1. Turn Main Power Switch on the right side of machine to the right (at 1 position), and press Start Switch.
- 2. Open the side door on the right.
- 3. Press "Reel Release Switch A" and pull out around 90cm strap.
- 4. Inset the strap to Guide Roller B and then to Guide C as showing in Fig. c & Fig. d.

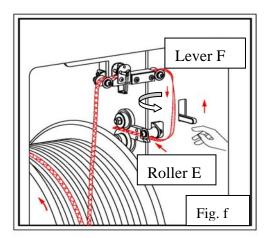

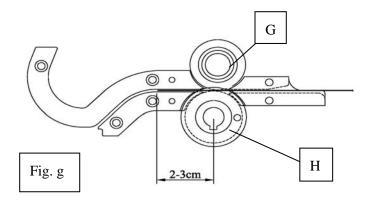

- 5. Keep threading the strap till the Guide Roller D (Fig. e).
- 6. Turning the strap downward and thread it to Roller E then to Roller G & Roller H (Fig. f & Fig. g).
- 7. Lift Lever F and then thread the strap around 2-3mm ahead the rollers (Fig. g) then release Lever F.

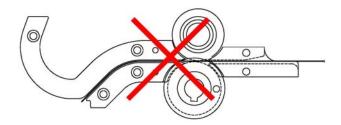

Caution:

If strap is fed more than 6cm ahead the rollers, it could make Auto Strap Feeding failed.

8. Close the side door and press Start Switch. Machine will complete the Auto Strap Feeding in 5 sec. and have the strap feeding to the sealing point.

Caution!

In the process of Auto Strap Feeding, only the Start Switch is functional. Neither Foot bar switch nor foot pedal switch will function.

Caution!

The cut edge of the strap must be free from burrs to avoid failure in Auto Strap Feeding.

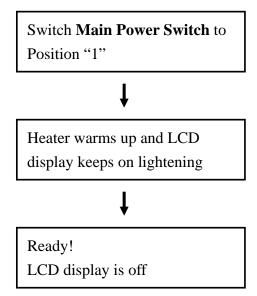

4. Operating the Machine

After switching on the strapping machine, heater starts to warm up and LCD display continues to be on until the heater reaches its operating temperature (about 2 minutes).

Caution!

Machine will not operate until heater reaches to operating temperature.

The heater fans continue to run until heater reaches operating temperature.

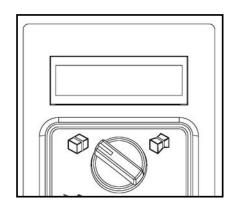

4.1 Soft Tension Operation

- 1. Place a package in the middle of table beneath the chute.
- 2. Push start switch or actuate foot bar switch or foot pedal switch (option) to start strapping.

NOTE!

When operating in soft tension mode, the strap tension potentiometer does not function.

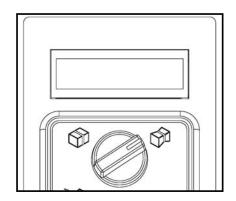

4.2 High Tension Operation

- 1. Place a package in the middle of table beneath the chute.
- 2. Properly adjust the strap tension potentiometer according to various package.
- 3. Push start switch or actuate foot bar switch or foot pedal switch (option) to start strapping.

Attention!

Keep hands away from the strapping area.

If hands are caught by P.P. strap accidentally, be sure to turn off the Main Power Switch first and then cut the strap.

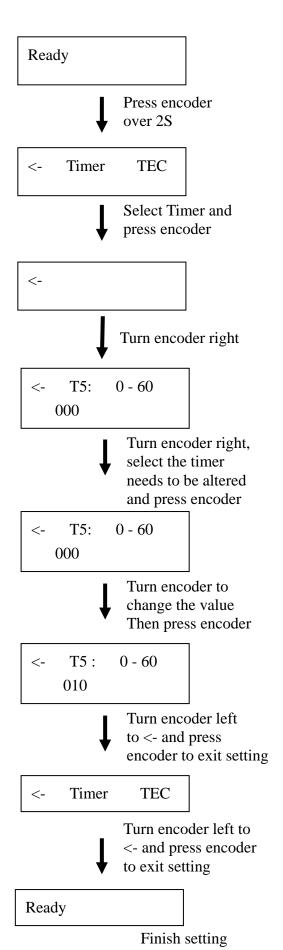

4.3 Function Encoder

LCD display will show various timers such as cooling time, timer 1, timer 2...etc. After pressing the function encoder for over 2 seconds, turn the knob to choose the timer needed to be changed. Press this knob to confirm the timer needed altered and turn it again to alter the value, and then press it again to confirm this alteration.

T1: see A17 timer 1 T2: see A17 timer 2

T5: cooling time timer, Range 0-0.6S

T4: Press bar delay time, Range 0-3S

5. Adjustments

5.1 Strap Amount in the Accumulator Box

The machine has been already well set for storing enough amount of strap in accumulator Box.

However, some adjustments may be required, depending on the actual quality or thickness of the strap used.

The strap supply in the accumulator box should be sufficient for about 2-5 strapping cycle.

(It depends on the package size and the arch size. Fewer cycles are available for bigger arch or bigger package.)

Caution!

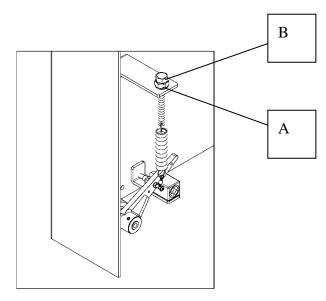

Excessive amount of strap in the Accumulator Box can lead to strap jam (too curved) and cause feeding problem.

Insufficient amount of strap in the Accumulator Box can lead to short feed problem or decrease strapping speed.

The adjusting mechanism for amount of strap is inside the machine, at the rear side of machine.

In case that there is insufficient amount of strap in the Accumulator Box, loosen the Nut A and turn the Screw Bolt B counterclockwise. After adjustments, be sure to tighten the Nut A to avoid unstable strap accumulation.

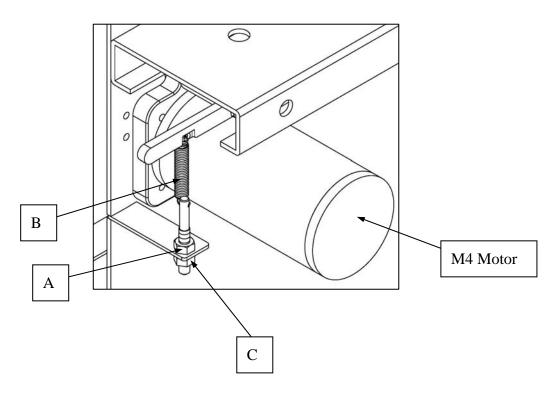

In case that there is excessive amount of strap in the Accumulator Box, loosen the Nut A and turn the Screw Bolt B clockwise. After adjustments, be sure to tighten the Nut A to avoid unstable strap accumulation.

5.2 Adjustment for Feeding Pressure to the Accumulator Box

The machine has been already well set for enough feeding pressure offering enough strength for pulling strap from strap coil to accumulator box. It might be necessary for some adjustments to increase feeding pressure if you are using smooth strap.

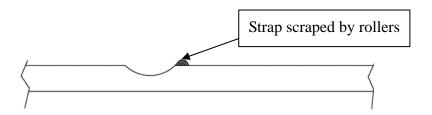

When it's necessary for increasing the feeding pressure, please loosen the Nut A and turn Nut C upwards to increase the strength of Spring B. Be sure to tighten Nut A by turning it counterclockwise after adjustments.

Caution!

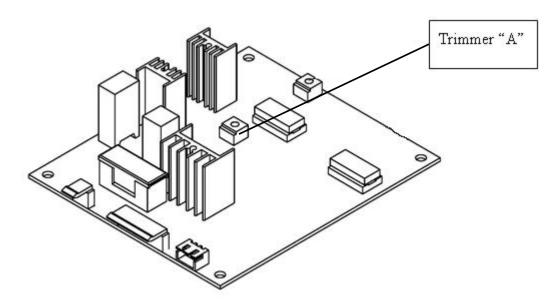

Too much feeding pressure could lead to feeding problem as the strap would be scraped by the rollers easily as show below.

Insufficient feeding pressure would lead to short feed problem as the strap is insufficient in the accumulator box.

5.3 Adjustment for Heater Temperature

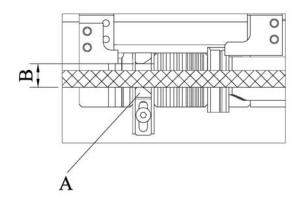

The machine has been already well set for proper heater temperature. It might be necessary to do some adjustments according to temperature in working environment, and the quality of P.P. strap to ensure better sealing efficiency. Turn "A" clockwise to increase the heater temperature and turn it counterclockwise to decrease the heater temperature.

5.4 Necessary Adjustments After Changing Strap Width

1. Adjusting "Strap Guide"

Adjusting the A (Strap Guide) according to the strap and make sure the width B is around 0.5mm (0.02") wider than the strap.

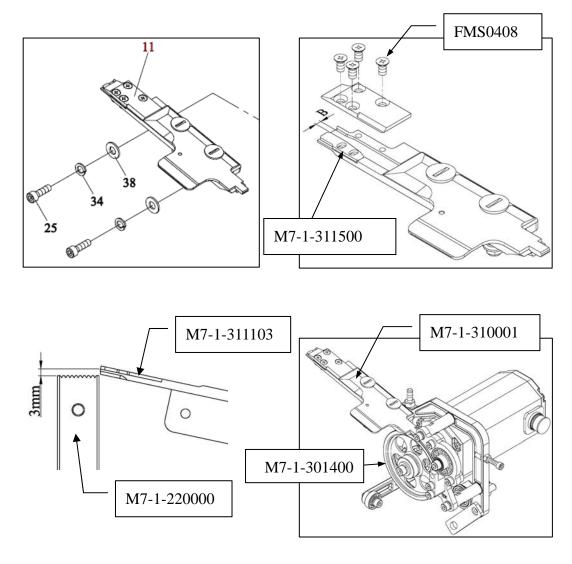

Caution:

If B is too wide, it would lead to sealing problem. However, if it's too narrow, it would lead to feeding problem.

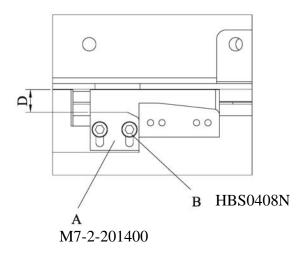

2. Adjusting "M7-1-311500 Adjusting Plate" only for 5mm and 6mm.

Loosen #25 HBS0412N×2 to remove #11 M7-1-310001 Upper Guide Ass'y (For 5-6mm) from the machine. Then loosen FMS0408×4 on it and take a piece of p.p. strap which would be running by this machine for properly adjusting M7-1-311500 Adjusting Plate (Only 5-6mm). Make sure the width B is around 0.5mm (0.02") wider than the strap. After proper adjustment, tighten FMS0408×4 and have M7-1-310001 Upper Guide Ass'y (For 5-6mm) fixed back to the machine. While having M7-1-310001 Upper Guide Ass'y (For 5-6mm) fixed back to the machine, be sure its left side must be around 3mm higher from Press Bar Ass'y M7-1-220000. Also the right bottom side of M7-1-310001 Upper Guide Ass'y (For 5-6mm) should have some clearance between M7-1-301400 Guide Wheel (For 5-6mm). This clearance should not be wider than the strap's thickness or strap would probably slip out while doing Auto Strap Feeding.

3. Adjusting "Right Strap Guide"

Loosen the screws on the "Right Strap Guide" and take it out. Then loosen the 2 screws B (HBS0408N) and adjust A according to the strap. Be sure D is about 0.1mm wider than the strap. After adjustment, tighten screws B and put the "Right Strap Guide" back.

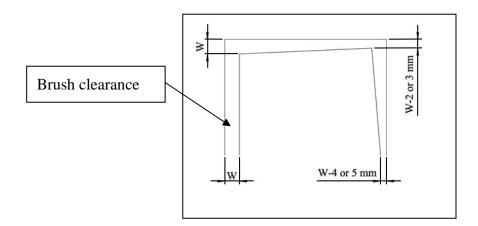

Caution:

If D is too wide, it would lead to sealing problem. However, if it's too narrow, it would lead to feeding problem.

4. Adjusting Brush Clearance in the Arch

The brush clearance in the left side and upper left should be about the strap width. The brush clearance in the upper right should be about 2-3mm narrower to the strap.

The brush clearance in upper side of right chute should be the same to the clearance in right side of upper arch. The brush clearance in the lower right should be 4-5mm narrower to the strap.

Note:

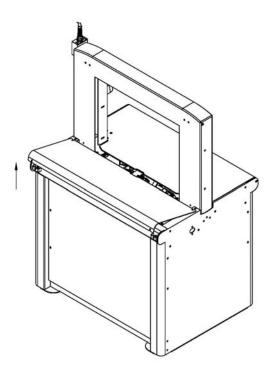

The brush clearance could be various according to different package size. The brush clearance needs to be bigger for not having any effect on reversing especially when the package size is close to the arch size.

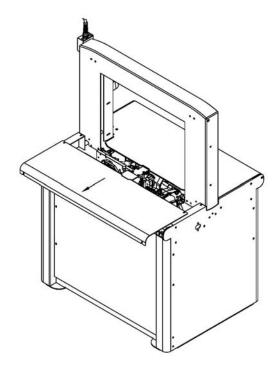

5. Adjusting Strap Amount in the Accumulator Box

Different strap widths might have effects on the strap amount in the accumulator box. Please do the adjustment according to 5.1 if necessary.

5.5 Adjustment for Feeding/Reversing Pressure

The upper table rear was screwed by captive screws. To take it out, please loosening the captive screws about 5mm first and then lift the end side of rear side up and slide it out.

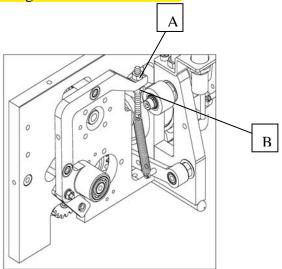

1. Adjusting the Pressure for Feeding

The machine is already well set for proper feeding pressure. However, according to different strap characteristics (such as smoother surface or different thickness), some adjustments for feeding pressure are still necessary.

If short feed problem happens a lot, and it is a result of improper feeding pressure, please do the following adjustments:

Loosen Nut B and turn Nut A clockwise to increase the feeding pressure. Or loosen Nut A and turn Nut B counterclockwise to decrease the feeding pressure. After adjustments, be sure to tighten these 2 Nuts well.

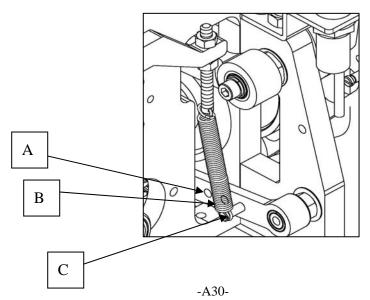

2. Adjusting the Pressure for Reversing

The machine is already well set for proper reversing pressure. However, according to different strap characteristics (such as smoother surface or different thickness), some adjustments for reversing pressure are still necessary.

If machine often has incomplete reversing problem, and it is a result of improper reversing pressure, please do the following adjustments:

Take out the part (TA-073 Spring Hook) from C position to B or A position in order to increase the reversing pressure.

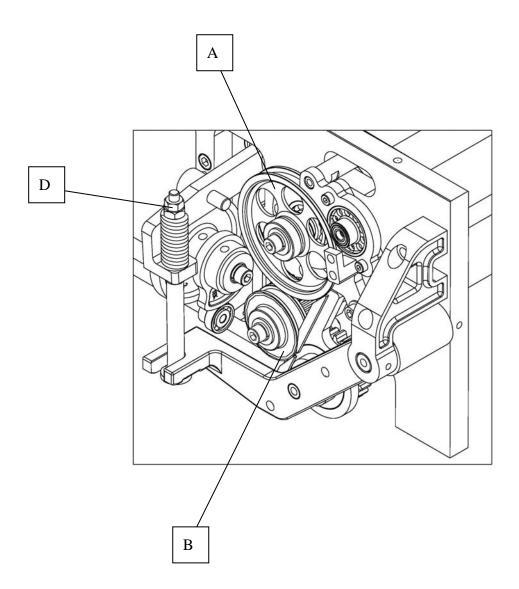

5.6 Adjustment on Tensioning Rollers for High Tension

The machine is already well set for proper pressure for high tension. However, according to different strap characteristics (such as smoother surface or different thickness), some adjustments on pressure for high tension might be necessary.

When insufficient strapping tension occurs even the Soft-High tension switch is at "high" position and it is a result of pressure for high tension, please turn Nut D clockwise. This can solve the problem of insufficient strapping tension at high tension and strap slipping between A & B due to this.

Note:

When the pressure for high tension is set too high, the tension for strapping would get lower.

6. Troubleshooting

The LCD display would flash and show failure message when machine is not working due to malfunction.

Message shown on the LCD could be follows:

1. Reminder message:

a. Push Start: Please press the Start Switch to make machine function. This is

especially necessary after the Safety Switch is released or after

you just turn on the machine.

b. <u>Load Strap</u>: Load a new roll of strap or re-do the Auto Strap feeding again.

c. <u>B6 open; K1 open</u>: When it shows this message after you press the Start Switch, it

means the Safety Switch might not be closed or the K1 in the

control box is abnormal.

2. Malfunction from switches:

a. S1 Error: This means the Start Switch or the Foot Pedal is continuously

triggered before activating them. Please check if any of these 2

Switches is defective.

b. <u>S5 Error</u>: This means the Reel Release Switch is continuously triggered

before activating it. Try to press it by hand to see if it's

defective.

c. <u>SQ1 on Error</u>: The SQ1 is triggered when doing Auto Strap Feeding. Check if

the SQ1 or the Switch lever is defective.

d. <u>SQ9 failure</u>: Foot bar is not able to function properly and cause it not able to

go back to home position.

3. Malfunction from procedures:

a. ASF failed: Auto Strap Feeding failed. It might be caused by wrong

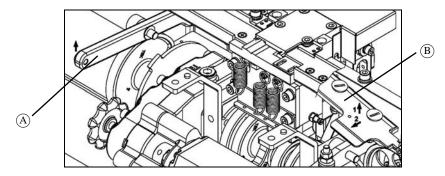

inserting direction or inserting too much strap. Please re-do the

Auto Strap Feeding.

b. Feed jam: Resulting from not being able to feed strap to the sealing position.

When Feed jam occurs, press the Start Switch or Foot bar first to let the arch open and strap comes out of the arch. Hold the strap by left hand and then press the Start Switch or Foot bar again. Machine would reverse the strap a little bit and cut it, and then machine would go back to home position and feed again.

If this does not solve the problem, please take out the jammed strap by following steps:

- b-1. Open Upper Table Front Ass'y M7-5-210001/M7-5-220001.
- b-2. Lift up the Lever (M7-2-101400/M7-2-101410) with left hand and take out the Cover (B) (M7-1-311201/M7-1-311211) for the Upper Guide with right hand at the same time.
- b-3. Take out the jammed strap and cut it.
- b-4. Put the cover (M7-1-311201/M7-1-311211) for the Upper Guide back to its position and put the Upper Table Front Ass'y back as well. Push START switch in the control panel to RESTART machine.

If the Feed jam problem still cannot be solved, the following causes have to be checked as well:

Fault	Cause	Remedy
	Strap is too curved	Change strap
	Insufficient feeding pressure	Adjust feeding pressure according to
Earlion		5.5
Feed jam	Too much strap amount in the	Adjust to proper strap amount in the
	accumulator box and has	accumulator box according to 5.1
	caused strap to be curved	

c. Other malfunctions:

Fault	Cause	Remedy	
	Too much debris on both sides	Clean both sides of the heater plate by	
Casling	of heater plate	fine sandpaper	
Sealing failure		Increase the heater temperature	
ranure	Insufficient heater temperature	according to 5.3	
	Insufficient cooling time	Increase cooling time according to 4.3	
	Soft-High tension switch is at		
	"soft" position	Turn it to "high" position	
Insufficient	Lubricant drops into tension		
strap tension	roller incautious	Clean the lubricant	
	Too much debris in the gear of		
	tension roller	Clean the debris	

7. Maintenance

Warning:

Before any maintenance or repairs on the machine, set the Main Power Switch to "O" (OFF). Wait about 5 minutes for cooling down the heater to avoid burns with this area.

1. Cleaning and Lubrication

The high reliability and long service life of the strapping machine will depend on regular cleaning and maintenance.

ATTENTION!

All the important strap transportation components, such as the drive rollers and the strap guides, must be kept free from oil and grease. (lubricant)

The lubricant has to be non-resinous.

The lubricant is SAE 30

2. Maintenance

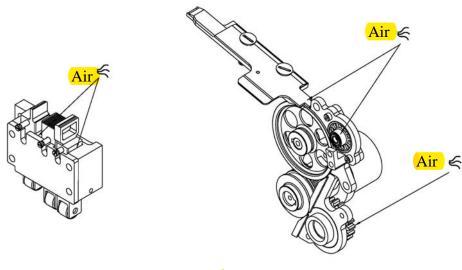

Only use original spare parts supplied by manufacturer.

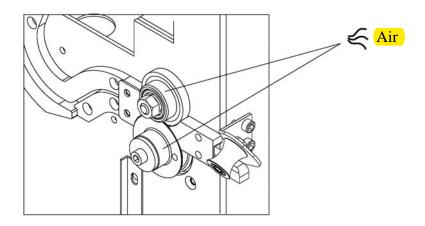

Daily:

Use air gun to clean the following indicated positions (nearby the cutters, strap guide and accumulating feeding rollers) daily.

Remove plastic residue in the machine.

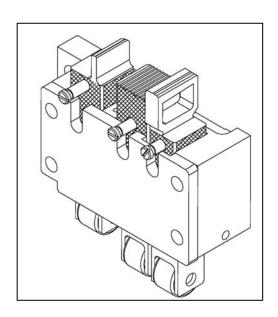

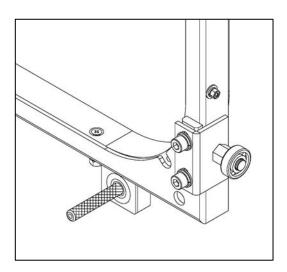

Weekly:

Lubricate front bar, press bar, rear bar and shafts in arch weekly.

Please refer to the following mesh areas for instruction.

Before lubricating, be sure to clean the parts first to avoid mixing oil and debris which might have a bad effect on machine's function.

Check the machine by strapping several bundles for any failures.

Monthly: (or 100,000 strapping cycles)

Clean both sides of heater plate and polish with fine sandpaper if necessary

ATTENTION: Make sure the welding plate is cool first!!

Check Front Bar, Press Bar, and Rear Bar for moving upward and downward neatly. The Slide Table and Strap Track Frame should be able to go back to its home position by the force of spring as well.

Be sure to clean any debris in the tension roller

6 Months: (or 500,000 strapping cycles)

Check heating element, replace and re-adjust it if necessary.

Check strap cutter in sealing head, replace it if necessary.

Check if the connector at wiring housing to printed circuit board is firmly fixed.

Check if the safety switch on front table or right door functions well.

Make machine ready for operation. Strap one bundle manually several times, paying attention to mal-functions, repeat procedure.

Initiating several cyclings with package manually for testing and pay attention to any mal-functions. Make sure the strap accumulating function is well. If necessary, replace the assistant rollers, do proper adjustments to accumulating feeding pressure or to the clearance in the reel brake.

Slightly lubricate the sealing head (bearing points) with light lubricant if necessary.

1 Year : (or 1,000,000 strapping)

Replace deflection roller if it shows visible changes.

In case of loud noise at bearings: locate them, replace the bearings.

Get machine ready for operation again, strap one bundle manually several times, paying attention to malfunctions.

3. Cleaning / Replacing Heater

Cleaning

- 1. Turn off the power and open the Upper Table Front Ass'y and Upper Table Rear Ass'y (M7-5-210001, M7-5-220001, M7-5-201401 & M7-5-230001).
- 2. Make sure that the heater cools down already and the temperature is not too hot to let you get hurt.
- 3. Loosen the fixed screws of the heater cover (M7-1-101700) and remove it from the machine.
- 4. Remove the screw (HBS0540HN) of Heater Crank (M7-1-141100).
- 5. Remove the Return Spring (T7-1-64130) of the Heater Crank (M7-1-141100).
- 6. Remove the Heater Crank (M7-1-141100) by pushing it backward.
- 7. Clean both upper side and down side of the Heater carefully with fine sander paper.
- 8. Re-installation the heater back to the machine in reverse sequence.

Replacing

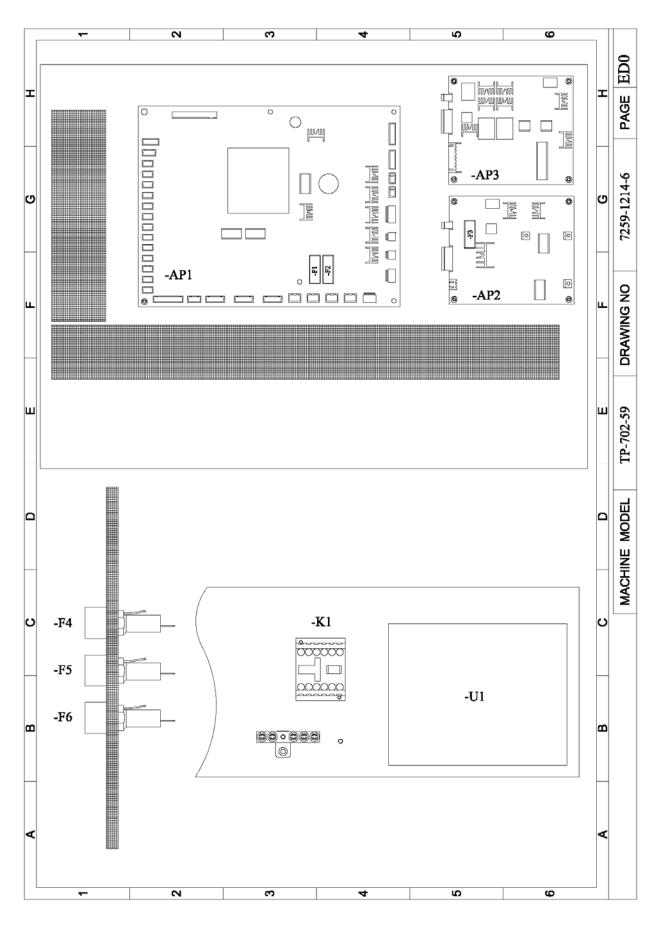

- 1. Same sequence as step 1-6 mentioned above.
- 2. Turn over the Heater Bracket (M7-1-141300) so that you can loosen the nuts of the heater.

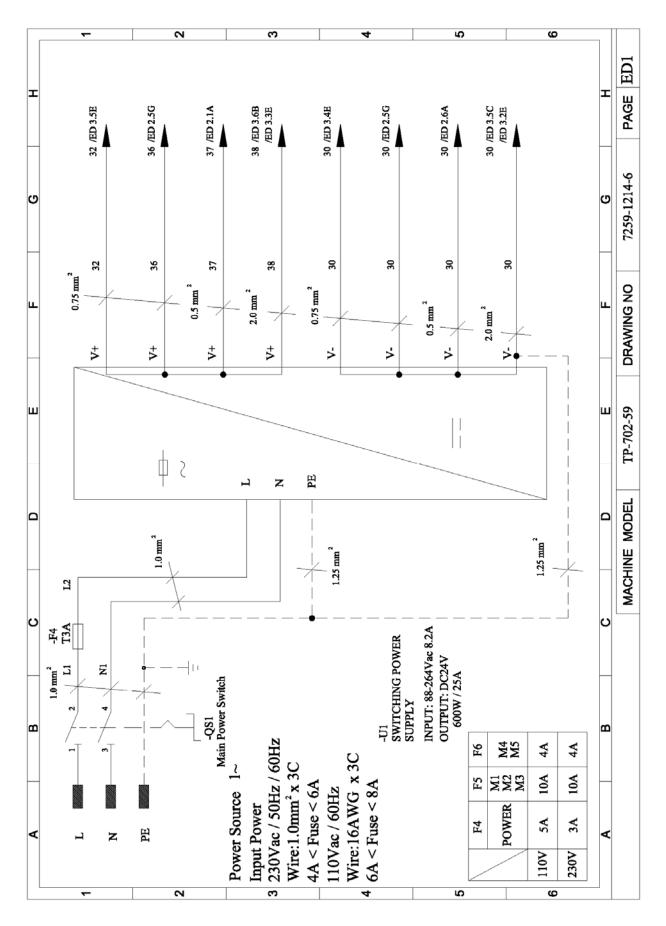

- 3. After you loosen the nuts, turn the Heater Bracket back to its original position.
- 4. Take out the Heater Ass'y and make sure the insulations stay intact. If any of insulation fall and get broken, please replace with new one to avoid welding problem.
- 5. Install the new Heater Ass'y in reverse sequence.
- 6. Rotate the M1 Handle (T7-1-11240) forward till the Heater Ass'y goes to welding position.
- 7. Make sure the clearance between Heater Ass'y and Slide Table (M7-1-131600) is about 1.8 2.2mm.
- 8. If the clearance is too big, adjust it by turning HBS0530N clockwise. If the clearance is too small, adjust it by turning HBS0530N counterclockwise.
