

# Aerated Grit Chamber WASTEMASTER DSF 2-3

# COMPACT PLANT FOR WASTE WATER TREATMENT

WASTEMASTER DSF consists of a sedimentation tank, a sand extracting screw and a floating screen. A grease scraper is available as an option for degreasing.

	Sedimentation	De-greasing
DSF 2	X	-
DSF 3	X	X

The first phase in the waste water treatment process is mechanical pre-treatment including:

- Sedimentation, lifting and de-watering of sand;
- Grease removal (DSF 3 only).

Subsequently the waste water is ready for further treatment (chemical, physical or biological), while solids are discharged for disposal.

## Benefits

- ✓ Decreased infrastructure costs
- ✓ Easy on-site machine assembly using standard tools
- ✓ Best footprint-net volume ratio for this type of machine
- ✓ Durable heavy-duty shaftless screws manufactured in patented process
- ✓ Self-adjusting scraper device
- ✓ SINT™ floating screw for heavy-duty applications (option)

## Features

- Flow rates of up to 210 litres per second (445 cfm)
- Sand separation with DSF2/ 3: 95% particle size  $\geq 200 \mu\text{m}$
- Grease removal with DSF3
- Modular design
- Self-adjusting scraper device
- Floating screw made of SINT™ engineering polymer ensures high removal of floating matter (option)

Option

Floating Screw System

Self-adjusting grease scraper with limited water removal

Extracting screw with variable inclination

## Accessories

- Blower
- Grease Pump
- Level Sensor
- Bagger
