Indigo Care provides a smart Australian designed Foldable Premium Cordless USB Cushion "Crash" Sensor Mat that is specifically designed to be used with our multifunctional USB Transmitter (RTU), and that will immediately alert staff when a resident steps on the sensor mat. The Cushion sensor mat is purposely designed for easier storage and trip-hazard free. The USB plug provides a more secure electrical connection that increases the sensor mat's strength and durability whilst extending its lifespan.

The USB transmitter is an exclusive ID encoded RF Transmitter which communicates with the Cordless Receiver (RRU) or the Universal Call Point (UCPV5.1). It allows the Cushion Floor mat to wirelessly transmit an alarm to the call point.

Simply connect the USB Transmitter to the cushion floor sensor mat and program it to the RRU or Dual Function Call Point by following the instructions printed on the Receiver. The cushion sensor mat will now trigger the call point when activated within the transmitting area.

(Note: USB Transmitter and USB Cushion Floor Sensor Mat can be ordered separately).
