

## **Eurosafe 170**

The XL thermodisinfecter for clinics with a high number of patients

With 40 years of experience in dentistry, Euronada is one of the world's leading companies in infection control. Its understanding of the market and ongoing research have enabled it to expand its range of thermodisinfectors with the introduction of the Eurosafe 170, the new XL thermodisinfecter from the Pro System line, which, thanks to its extra-large capacity, meets the needs of facilities with a large number of instruments to process.

### **Extra-spacious and ergonomic**

Characterised by its minimalist, compact design, the Eurosafe 170 boasts an exceptional load capacity inside. Its spacious 170-litre chamber can thermodisinfect a charge equivalent to 4 full loads of a 24-litre autoclave, corresponding to more than 250 instruments.

Sold with a full set of standard accessories that allow you to handle every load in the best possible way and simplify your daily work, thanks in part to small but essential ergonomic features. These include a glass door that allows you to keep an eye on your instruments during the thermodisinfection cycle and a flap opening that provides a convenient loading surface, simplifying the process of loading and removing instruments.

### **Powerful, flexible and reliable**

The injection washing system with independent spray arms for each level and the forced air drying system, guarantee deep cleaning, reaching even the inside of hollow-body instruments, with perfect drying.

Easy to programme and customise, the Eurosafe 170 is designed to offer maximum usability during daily procedures. It also allows you to allocate your 3 favourite cycles to the quick selection buttons on either side of the display, so that you can start the desired washes

instantly. You can also customize up to 20 programs. This allows you to perform additional cycles – for example: wash and dry, rinse and wash, wash and disinfect plus more.

Efficiency and longevity are guaranteed by a series of advanced safety systems. The Eurosafe 170 monitors the correct regeneration of the integrated softener resins. Furthermore, the water filtering system preserves pump performance over time, while the aquastop system stops the water flow in the event of malfunctions or leaks. Finally, the automatic dispenser calibrates and injects detergent liquids independently and without waste.

## Tailor-made traceability

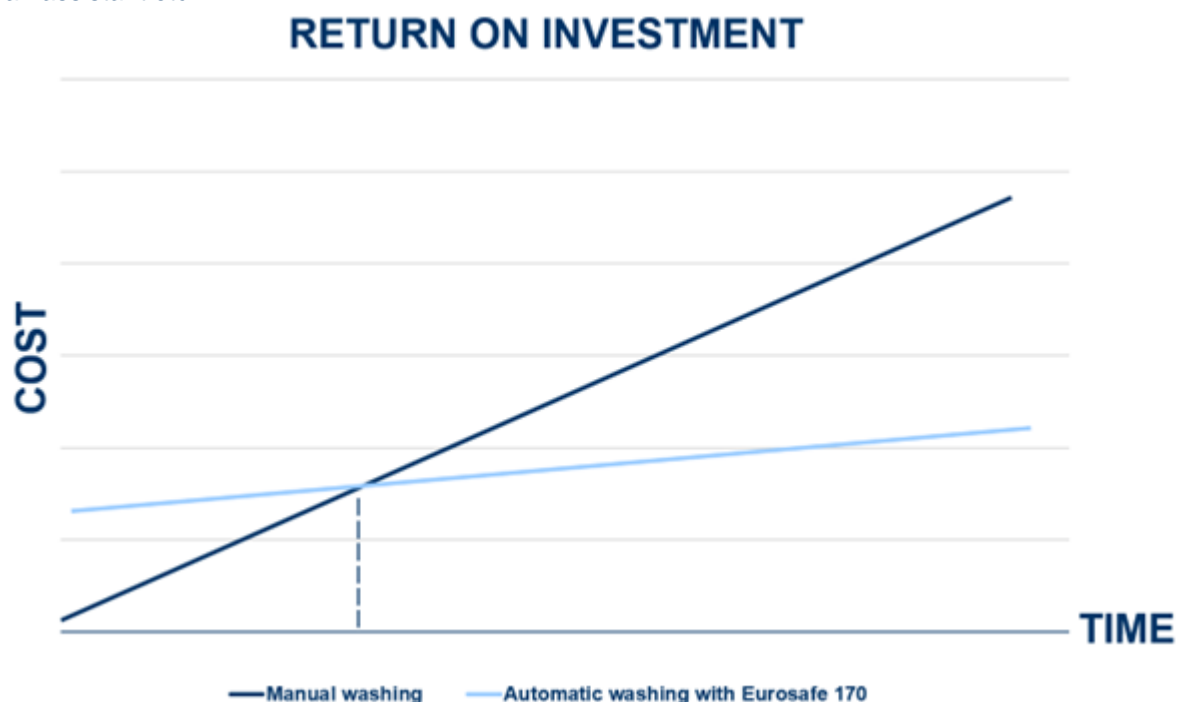

The Eurosafe 170 validates and tracks all cycles performed, allowing data to be saved onto a USB stick, transferred to a PC via a data logger or printed via an external printer (both optional).

## Convenient

Using a thermodisinfectior has many advantages for practice staff, including a reduced risk of accidental injury and environmental contamination caused by aerosols and splashes. It also saves a significant amount of water and reduces the workload of operators, freeing them to spend more time on specialised activities.

Taking into account average water and energy costs, a practice running 4 sterilization cycles per day can reach the break-even point within 19 months of purchasing the thermodisinfectior. In 5 years, the Eurosafe 170 can save up to \$28,000 and 3000 hours of assistant work\*.

\*Calculations made with EU data concerning water and electricity expenses and the average salary of an assistant etc.

### **Why choose the Eurosafe 170?**

- **Large load capacity**
- **Minimises human error**
- **Traceability**
- **Saves time and money**

The Eurosafe 170 is available in two versions:

1. 240v single phase
2. 3 phase having quicker cycle times
