The results speak for themselves:

For the 2 weeks prior to installing Ai-Menu, one Mexican restaurant sold 16 'extra' guacamoles… during the 2 weeks after installation they sold 384!

With Ai-Menu, one Japanese restaurant group upsold $6,500 worth of extra sauces & sake chasers in one month - they used to give the sauces away for free.

A burger restaurant averaged drinks sales of approx. 15% of turnover. On the first Friday of using Ai Menu, drink sales were over 30% – easily a 4 year record!

A popular beachside cafe with up & downstairs seating areas achieved a 12% increase in sales. They also save on wages by only requiring one waitperson to run the upstairs area.
