SOLUTIONS FOR STEEL FABRICATORS

Straightening machines / Bending press / Rotator 360° - turning device

UNIVERSAL BENDING - AND STRAIGHTENING MACHINES

BENDING AND STRAIGHTENING WITH THE SAME MACHINE

101 T-Profil straightening

ROBUST AND PROVEN FOR DECADES IN TOUGH CONDITIONS

The Stierli bending and straightening press is perfect to bend, straighten or camber beam profiles, plates or weldments. This world-class machine is sturdy and has proven over the decades to perform in a wide variety of applications.

MACHINE MODEL	420 HE 420 CNC	820 HE 820 CNC	1300 HE 1300 CNC
Working force	42 tons 420 kN	82 tons 820 kN	130 tons 1300 kN
Tooling height	200 mm	300 mm	300 mm
Straightening / cambering Capacity (420 N/mm ²)	HEA 180	HEA 280	HEB 300
Flat steel bending Capacity (420 N/mm ²)	200 x 20 mm	300 x 20 mm	300 x 30 mm
Pipe bending	2" (60.3mm)	3" (88.9mm)	3" (88.9mm)

THE STIERLI-BENDER IS A GREAT MULTI-TALENT

- Horizontal bending
- Straightening
- Cambering
- Forming tools
- Press bending
- Special tools

102 Pipe bending

103 Flat steel bending

CAMBERING- AND STRAIGHTENING PRESS

104 Round bar straightening e.q. $\varnothing 300\text{mm}$

105 Beam cambering or straightening

106 L- / T- / U- profiles straightening

107 Beam straightening or bending in upright position

MACHINE MODELS	1300 RP	2200 RP	3300 RP	4400 RP	6000 RP	8800 RP
	1300 NC+	2200 NC+	3300 NC+	4400 NC+	6000 NC+	8800 NC+
Working force	130 tons 1300 kN	220 tons 2200 kN	330 tons 3300 kN	440 tons 4400 kN	600 tons 6000 kN	880 tons 8800 kN
Tooling height	300 mm	600 mm	850 mm	1050 mm	1050 mm	1200 mm
Straightening / cambering Capacity (420 N/mm ²)	HEB 300 (Wx=1890 cm ³)	HEB 600 (Wx=5700 cm ³)	HEB 1000 (Wx=12890 cm ³)	HEM 1000 (Wx=14330 cm ³)	on request	on request

108 Integrated in beam line

109 Bend angle steel kink

110 Straightening after thermal cutting

111 Pipe bending up to $\varnothing 400\text{mm}$

112 Add beam stiffener with the Stierli press

113 Double straightening press, incl. laser system, electromechanical tool adjustment, laser profile measurement, Roller- and cross conveyor system as well as 4x90° turning devices

114 Straightening press with several straightening pins for bulky welded constructions

CONTROL SYSTEMS & ACCESSORIES

120 Straightening large L-profiles 300x300x30mm

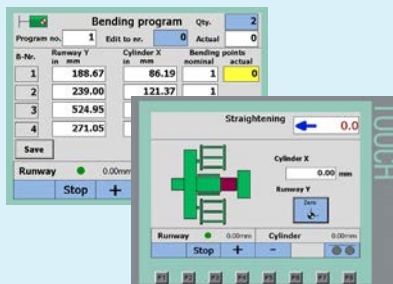

Manual control:

- Simple and easy setting of the cylinder advance and return position with the proven Stierli switch-off system with Nominus scale and 0 mark.
- Precise bending and straightening with fine stroke adjustment. 3 bending and straightening programs support the bending and straightening process.
- Continuous speed regulation from 0 to 0.6 m/min.

NC+ control:

- Digital setting of the cylinder advance and return position with „teach-in“ button. The fine stroke adjustment with the +/- 0.1mm correction buttons for the cylinder stroke allows precise bending and straightening.
- Possibility to work in manual mode as well as in automatic mode to run complete bending or straightening programs, including integration of the roller conveyor into the bending program.
- Display of deformation using advanced, modern STIERLI laser system (optional)

124 2-cylinder straightening machine

CNC- control:

- All functionalities such as NC+ control.
- Laser controlled cnc-control system, which supports the process of beam cambering in the best possible way. The operator can numerically enter the cambering height. The hydraulic horizontal press automatically controls the cylinder stroke and the feed of the driven roller conveyor.

128 Crane beam straightening (instead of flame straightening)

115 600 tons straightening press combined with ROTATOR for fast and safely turning of beams within the machine.

116 Driven roller directly at the machine

117 Cross conveyor system

118 Torsion (twist) bending or straightening

119 Turning device 90°

121 Automatic straightening, optionally also with automatic feeding system

122 Double straightening press (Bending in both directions without turning the workpiece), incl. tool quick adjustment

123 Double straightening press with 2 cylinders

125 Beam straightening or cambering (bending) for steel fabricators or steel service centers

126 Heavy bending works e.q 400x60 mm

127 Bending of thick sheet metal

129 4x90° turning device

130 Turning device can be combined with roller conveyor

131 Laser measurement along the entire profile length, incl. creation of a report

132 880 to press with 2x30m roller conveyor

- INCREASE YOUR PRODUCTIVITY
- SAVE MORE THAN 30-40% OF WORKING TIME

The Stierli Rotator is developed for turning quickly and safely heavy and bulky loads such as beams and welded constructions without a crane. This will save a lot of working time and increase productivity.

ROTATOR 360°

Turning device

301 Lower the beam

302 Arms closes automaticly

303 Start!

319 Easy positioning with pallet truck, crane or optional rollers.

FAST FACTS:

- ✓ 360° Fast turning and rotating without a crane
- ✓ Welding and dressing in sag curve
- ✓ No waiting for the crane, turning at any time
- ✓ Working in every position
- ✓ 2 turning directions and adjustable height
- ✓ Very easy and fast to use
- ✓ Mobile system, with pallet truck or crane
- ✓ Distance between the 2 stands: mobile, freely adjustable, standard cable length 15m
- ✓ Durable chain for safety when turning (no belts)
- ✓ Very robust construction for long life

Welding in flat position increase the productivity

MACHINE MODEL	ROTATOR 600	ROTATOR 1000	ROTATOR 1500	ROTATOR 2000	ROTATOR 2500	ROTATOR 3000
Loading capacity (per pair) *	6000 kg or 12000 kg *	6000 kg or 12000 kg *	6000 kg or 12000 kg *	6000 kg or 12000 kg *	6000 kg or 12000 kg *	6000 kg or 12000 kg *
Inserting clearance	600 mm (z.B HEB 600)	1000 mm (z.B HEB 1000)	1500 mm	2000 mm	2500 mm	3000 mm
Distance between stands	0 - 15 m	0 - 15 m	0 - 15 m	0 - 15 m	0 - 15 m	0 - 15 m

* optional 17000 kg or 30000 kg

313 Adjustable height and 2 turning directions

314 Several Rotators for very long parts

315 ROTATOR integrated in a roller conveyor (e.g beam welding line)

316 ROTATOR in combination with welding robot

317 ROTATOR increase your safety

318 Durable chain for safety when turning

The machine can easily straighten flanges of welded H and T beams.

The robust construction of the flange straightening machine guarantees reliable operation, accurate straightening results and a long service life, while requiring a minimum of maintenance. The horizontal design of the machine allows even the largest beams to be handled with ease.

The machine features a heavy duty, powerful hydraulic system and automatic operation. The workpiece can be easily loaded into the machine by overhead crane. A roller conveyor is needed to ease the movement of the beam and allow an automatic operation. The extremely sturdy lower roll is adjustable and the web and flange rolls keep the profile properly positioned.

MACHINE MODEL	FRM-15	FRM-20	FRM-30	FRM-40	FRM-50
Max. flange thickness t_2	15 mm	20 mm	30 mm	40 mm	50 mm
Max. beam height a	2000 mm	2000 mm	2000 mm	2000 mm	2000 mm
Max. width H-/T-profil b	200-500* mm	200-500* mm	200-500* mm	200-500* mm	200-500* mm

* 800mm flange width on request

FLANGE STRAIGHTENING MACHINE

403 With driven roller conveyor
