

Absorb Spill Safe Mat

Consisting of a layer of absorbent, covered by a tough, woven polypropylene material the Spill Safe Mat is reusable and durable enough to withstand light traffic.

The standard size is 2.0m x 3m which will absorb up to 20 litres of hydrocarbons.

The Spill Safe Mat is ideally suited for work in the field. Typical uses are for under vehicles during infield maintenance and protection at any refuelling points.

The Spill Safe Mat provides a clean and dry working surface to operate on the vehicle particularly in wet conditions where the hydrophobic nature of the Mat keeps water out.

The mat is easily cleaned for reuse if soiled by mud or water.

Spill Safe Mat Sizes are :-

AES SSM3 1.5m x 2.0m

AES SSM1 2.0m x 3.0m

AES SSMC Custom
